Jahez iOS: Bug Report

Personal independent QA project. Tester: Norah K. Alshdoukhi. Tracked in Jira (space "Jahez iOS QA").

Environment: iPhone 16 Pro Max, iOS 18.7.8, Jahez v429 (main run) and v429.1 (re-test), English.

Summary

Key	Type	Summary	Priority	Severity
KAN-4	Bug	Cart quantity has no upper limit	Low	Minor
KAN-5	Observation	Long unrelated search text returns results instead of "No results"	Low	-
KAN-6	Observation	Phone field accepts pasted letters, rejected only on Continue	Low	-
KAN-7	Observation	Saved addresses cannot be edited (delete only)	Low	-
KAN-8	Observation	No in-app indication when iOS notifications are disabled	Low	-

KAN-4: Cart quantity has no upper limit (reached 313 for a single item)

Type: Bug | **Priority:** Low | **Severity:** Minor | **Status:** To Do | **Label:** severity-minor

Steps to reproduce

1. Open cafe "Geisha" (جيشا) and add "coffee day" (قهوة اليوم, SAR 12) to the cart.
2. Open Cart.
3. Tap + repeatedly until the quantity reaches 313.

Expected: A maximum quantity limit, or a message when the limit is exceeded.

Actual: The quantity reached 313 with no limit or message, and could still be increased.

Re-test (29/10/2026, v429.1, Wi-Fi): Still reproducible. Quantity reached 54 with no limit or message.

Note: This may be intended behavior and needs product confirmation. No order was placed.

Evidence: Screen recording attached to the Jira ticket.

Observations

These are not clear defects. They are possible improvements for the product team to decide on.

KAN-5: Long unrelated search text returns results instead of "No results"

- **Steps:** Home, tap Search, paste a long text of unrelated words (for example "تست مطعم وجبات اختبار عربي حلويات مقهى...").
- **Expected:** "No results found" or clearly relevant results.
- **Actual:** A list of unrelated restaurants and cafes is shown.
- **Note:** May be an intended fuzzy search.

KAN-6: Phone field accepts pasted letters, rejected only on Continue

- **Steps:** Open login, paste text with letters into the phone field, tap Continue.
- **Expected:** Letters rejected immediately on paste.
- **Actual:** Letters appear in the field, then "The number provided is invalid" is shown on Continue. The keyboard itself is numeric only.

KAN-7: Saved addresses cannot be edited (delete only)

- **Steps:** Add an address at checkout, then open it from the saved addresses list.
- **Expected:** An option to edit the address.
- **Actual:** Only delete is available.

KAN-8: No in-app indication when iOS notifications are disabled

- **Steps:** iPhone Settings, Notifications, Jahez, turn off Allow Notifications, then reopen the app.
- **Expected:** A reminder or prompt to enable notifications.
- **Actual:** No message appears. The app is unaffected.

Not logged in Jira

- The bottom navigation bar changes when entering Shops (Discover, Shops, Cart, Search, Profile). Seen on v429.1, not compared with v429 because Shops was out of scope. Likely by design.
